### What are the dangers of importing a battery?

Common dangers when importing batteries include: Thermal runaway: This is when damage to the battery causes a chain reaction or short circuit that leads to overheating and even explosions. Leakage: Battery electrolyte fluids can irritate the skin and eyes of anyone coming into contact with it.

### Do you need a license to import a lithium battery?

Most lithium battery regulation has to do with the shipping process. If you are planning on importing for export, you'll want to check in with local governments for legal matters. There is also a chance you will need a license for the product using the battery rather than for the battery itself. This makes the next step very important.

### What documents do I need to import a lithium battery?

Having a customs consultant review and confirm your HTS codes is the best way to avoid this problem. Basic import documents include the Bill of Lading (BoL) and the commercial invoice. Regardless of commodity, these are needed. Other documents you might need will depend on how you ship lithium batteries into the country.
