

# **Guatemala Mobile Outdoor Communication Power Supply BESS**

## Overview

---

Which communication interfaces are compatible with a mobile Bess?

The investigation compares the identified communication interfaces and their respective applicability to a mobile BESS, specifically the VMS. For specific power utility applications, it is clearly noted that the standard IEC 61850 allows clear benefits compared to the other investigated interface.

What applications can a mobile Bess support?

The project aims to perform a thorough analysis of the various communication interfaces applicable to the applications that a mobile BESS can help support, of which, some typical VMS applications are construction sites, festivals, and EV charging stations.

What are the environmental conditions of a mobile Bess system?

Due to the flexible and mobile nature of mobile BESS, the environmental conditions can differ greatly for each system depending on the respective mobile deployments. Ranging from high temperatures and high humidity to the inverse during the same season, monitoring and control of the TMS is critical.

What is a typical mobile Bess application?

Another typical mobile BESS application is microgrid operations. Which could be at remote locations on or ofgrid depending on operation and grid availability. Typical usages are at construction sites or event/festival areas where grid connections may be severely inadequate or underdimensioned for the usage needed.

What auxiliary loads are needed for a Bess project?

Fire safety systems, such as fire alarms, control panels and gas ventilation systems (if present). These auxiliary loads are essential for ensuring the safe and efficient operation of BESS projects. Therefore, providing a reliable power

supply for these auxiliary loads is crucial.

What are the operational functions deemed interesting for mobile Bess operations?

A summary of the operational functions deemed interesting for mobile BESS operations are presented and explained below. DAGC: This operating function, Automatic Generation Control, is utilized by the balancing authority to control the DER active power output for managing the asset, mainly for frequency regulation .
