How much does a solar panel installation cost?

Solar panel installation costs vary by the installation company and project scope, making it challenging to pinpoint exactly how much you'll pay to have a pro install your solar panels. However, the U.S. Department of Energy estimates that installers add around \$2.25 per watt to the cost of a solar panel installation.

How much does a solar inverter cost?

**Inverter:** A solar inverter converts the generated DC electricity into AC electricity that can be used to power your home. The cost of an inverter depends on its size and efficiency, but these devices typically cost between \$1,000 and \$3,000. **Mounting system:** This is what holds rooftop solar panels in place.

How do I finance my solar panels?

Many top solar companies, like Blue Raven Solar, offer other ways to finance your solar panels, including power purchase agreements (PPAs) or some combination of a solar lease and solar loan. A PPA is similar to a solar lease, only an energy company owns and installs the panels, and you pay for the energy produced.

How do I pay off my solar panels?

Paying in full is a great way to pay off your system because you won't incur interest fees, but taking out a loan is the next best and most common option due to the high costs of solar panels. If you choose to lease your panels, it may cost less up front, but you'll be ineligible to receive the 30% federal tax credit.

Should you lease or buy solar panels?

If you're wondering if you should lease or buy solar panels, the most

economically advantageous option is to buy them. Paying in full is a great way to pay off your system because you won't incur interest fees, but taking out a loan is the next best and most common option due to the high costs of solar panels.

How much energy do solar panels produce a day?

According to the EIA, most U.S. households consume between 6,200 and 14,800 kWh of energy annually, or around 10,800 kWh on average. Meanwhile, most solar panels produce between 1.5 to 2.2 kWh per day, with the actual amount of energy produced depending on the amount of direct sunlight and the number of watts.
