

# **Jordan 300MW energy storage project**

## Overview

---

Will Jordan build a \$40 million battery facility?

Jordan's government has reportedly agreed on proposals for a \$40 million battery facility to push forward the country's energy storage ambitions. The government has signed a memorandum of understanding with 23 international firms and consortia to build a battery storage facility with a capacity of "at least" 30MW, according to The Jordan Times.

Is battery energy storage possible in Jordan?

In response to this, Fichtner in collaboration with the Jordanian Ministry of Energy and the transmission system operator, NEPCO, has analyzed the potential for battery energy storage and, in the role of Transaction Advisor, is providing support for implementing a pilot project.

Will Jordan be able to generate more electricity by 2030?

It envisions that by the end of 2030, 48.5 percent of the country's electricity generation would come from local energy sources. Jordan has long-term potential for additional RE, enjoying an average of 316 sunny days per year, having wind speeds ranging between 7 and 8.5 m/s, and having large desert areas with a low population.

Is Jordan a potential energy producer?

Jordan has medium- and long-term potential as an energy producer of non-conventional and RE. The following are potential opportunities that are either in process or in the pipeline over the medium term: The \$2.9 billion project will provide 300 million cubic meters of desalinated water from the Gulf of Aqaba to Amman per year.
