

# **Solar Onsite Energy Outdoor Reset**

## Overview

---

### How do I Reset my Solar System?

This is usually done if the inverter (AKA the brain of your system) is showing a red or yellow light. Read below for step-by-step instructions on how to reset your solar system. Locate your inverter (it is usually in the garage or on an exterior wall) and lift open the bottom panel. Find the AC/DC toggle switch and power down your inverter.

### Should I Reset my solar panels?

A simple reset can often solve these problems. Resetting your solar panels can fix error lights, boost energy output, and keep your system running smoothly. It's a lot like restarting your computer when it acts up. Don't worry if you're not tech-savvy. This guide will walk you through the process step by step.

### Should I Reset my Solar System at night?

A proper reset won't hurt your panels' efficiency. It can actually help by fixing small glitches. If your system still seems slow after a reset, you might have a bigger problem. Get it checked out by a pro. Can I reset my solar system during nighttime or should I wait for daylight?

You can reset your solar system at night if needed.

### How do I Reset my solar lights?

This simple step is key to making sure the reset works properly. Give them about 30 seconds to a minute off; this little break lets the internal system fully reset. After that brief wait, turn the lights back on. For a lot of solar lights, this is all you need to do to reset them. But, some lights come with a special reset button.

### How do I Reset my solar inverter?

Follow these steps carefully to ensure a safe and effective reset process. Find your solar inverter, usually mounted on a wall in your garage or outside. Look for the AC/DC toggle switch on the inverter's front or side panel. Flip this switch to the "off" position to power down the inverter. Keep safety in mind as you handle electrical components.

How do I Turn Off my solar energy system?

Move the lever to the "off" position. Be prepared; it may make a loud popping sound. Find your main electrical panel. Inside there should be a breaker dedicated to solar. It will be labeled "Photovoltaic," "Solar PV," or "Solar System." Flip that set of breakers to the "Off" position. You have now completely turned off your solar energy system.
